

# Flow-Liner®

**“Keeps the Pool Open”**

**With a Pipe Lining Technology Answer**

MRC Activity Pool

Flow-Liner® Equipment Set-up

## History

The Muskingum Recreation Center (MRC) is a non-profit corporation organized in June of 2009 by four entities that came together to form the partnership, The Muskingum County Community Foundation, The Muskingum Family Y, Genesis HealthCare System and Ohio University Zanesville. Individuals from these entities worked over the next three years on a plan to construct the 100% self-sustaining Aquatic/Recreation Center. The MRC opened in March 2014 and is located on the Ohio University Zanesville Campus. The facility promotes health, education, and recreation through a network of quality programs, activities, and amenities that strengthen the individual, family, and community and is open 7 days a week.

## Problem/Issue

The pool contractor, Patterson Pools, LLC, contacted a Flow-Liner Certified Installer regarding a leak in the Activity Pool at the newly constructed MRC facility. The Activity Pool was losing water from an 8 inch main drain pipe. The pipe was located under concrete, with multiple 90° and 45° fittings. The length of the pipe was approx. 108 feet. Excavation of the drain line was not an option.

## Solution

Using Flow-Liner® technology, a Flow-Liner Certified Installer used the Flow-Liner Pipe Lining System to line the 8” main drain pipe.

## Results

The pool drain pipe was successfully lined without excavation. There was limited disruption to the schedule at the busy Activity Pool. The Service Manager of Patterson Pools, LLC commented:

*“We are very pleased with how the Flow-Liner installation was performed by your installer. The pipe lining saved us from having to dig up concrete and replace the piping, which would have been very costly and inconvenient. We highly recommend your product and consider it a viable option compared to pipe replacement.”*
