

# Flow-Liner®

## “Keeps the Justice Flowing” With A Pipe Lining Technology Answer

### History

The Darke County Correctional Facility is a 36 bed nonsmoking county owned jail located just outside Greenville, Ohio. The facility was built in 1983 and is in its 20th year of operation. Programs that are offered at this facility include work release, inmate worker, and community service.

### Problem/Issue

The facility had 3", 4", 5" and 6" cast iron main sanitary sewer pipes throughout the facility that were in need of cleaning and repair. Being a Correctional Facility operating at capacity 7 days a week/24 hours a day, replacement was not an option.

### Solution

Using Flow-Liner® technology, a Flow-Liner® Certified Installer cleaned and prepared the cast iron sanitary sewer lines and installed the Flow-Liner® Cured-in-Place Pipe Lining System. Using a robotic cutting system, the Flow-Liner® Certified Installer, reinstated multiple taps in each of the lined cast iron sanitary sewer pipes.

### Results

The cast iron sanitary sewer lines were successfully lined with no disruption to the facility's operations. The Darke County Sheriff, Toby Spencer, was very pleased with the results and commented:

***"The pipe lining crew was very professional and courteous. They did a great job for us and in a timely manner. The pipe lining saved us from having to dig up and replace the piping, which would have been very costly and inconvenient. We highly recommend your product and consider it a viable option compared to pipe replacement."***
