

Flow-Liner® Systems

“Steels the Spotlight”

With A Pipe Lining Technology Answer

AK Steel Facility

Located on 1300 acres in Western Pennsylvania, AK Steel found a need for an innovative trenchless technology solution for their processing drain pipes.

Renick Brothers Construction reached out to Flow-Liner® Systems on behalf of AK Steel.

By use of the Flow-Liner® Cured-in-Place-Pipe Lining system, a Certified Flow-Liner® Installer was able to meet their pipe lining needs in only a day and a half's time. This quick and non-invasive method caused minimal disruption to the facility's important daily activities.

Cured-in-Place-Pipe Lining in Progress

Renick Brothers Construction and AK Steel were very pleased with the professional and knowledgeable Certified Installer, and were “glad they did not have to excavate their concrete which would have been costly and inconvenient.”

Before Lining

After Lining

We are pleased to announce another successful project and proudly add

AK Steel/ Renick Brothers Construction

to our list of happy and satisfied customers.
